Configurable Architecture 300

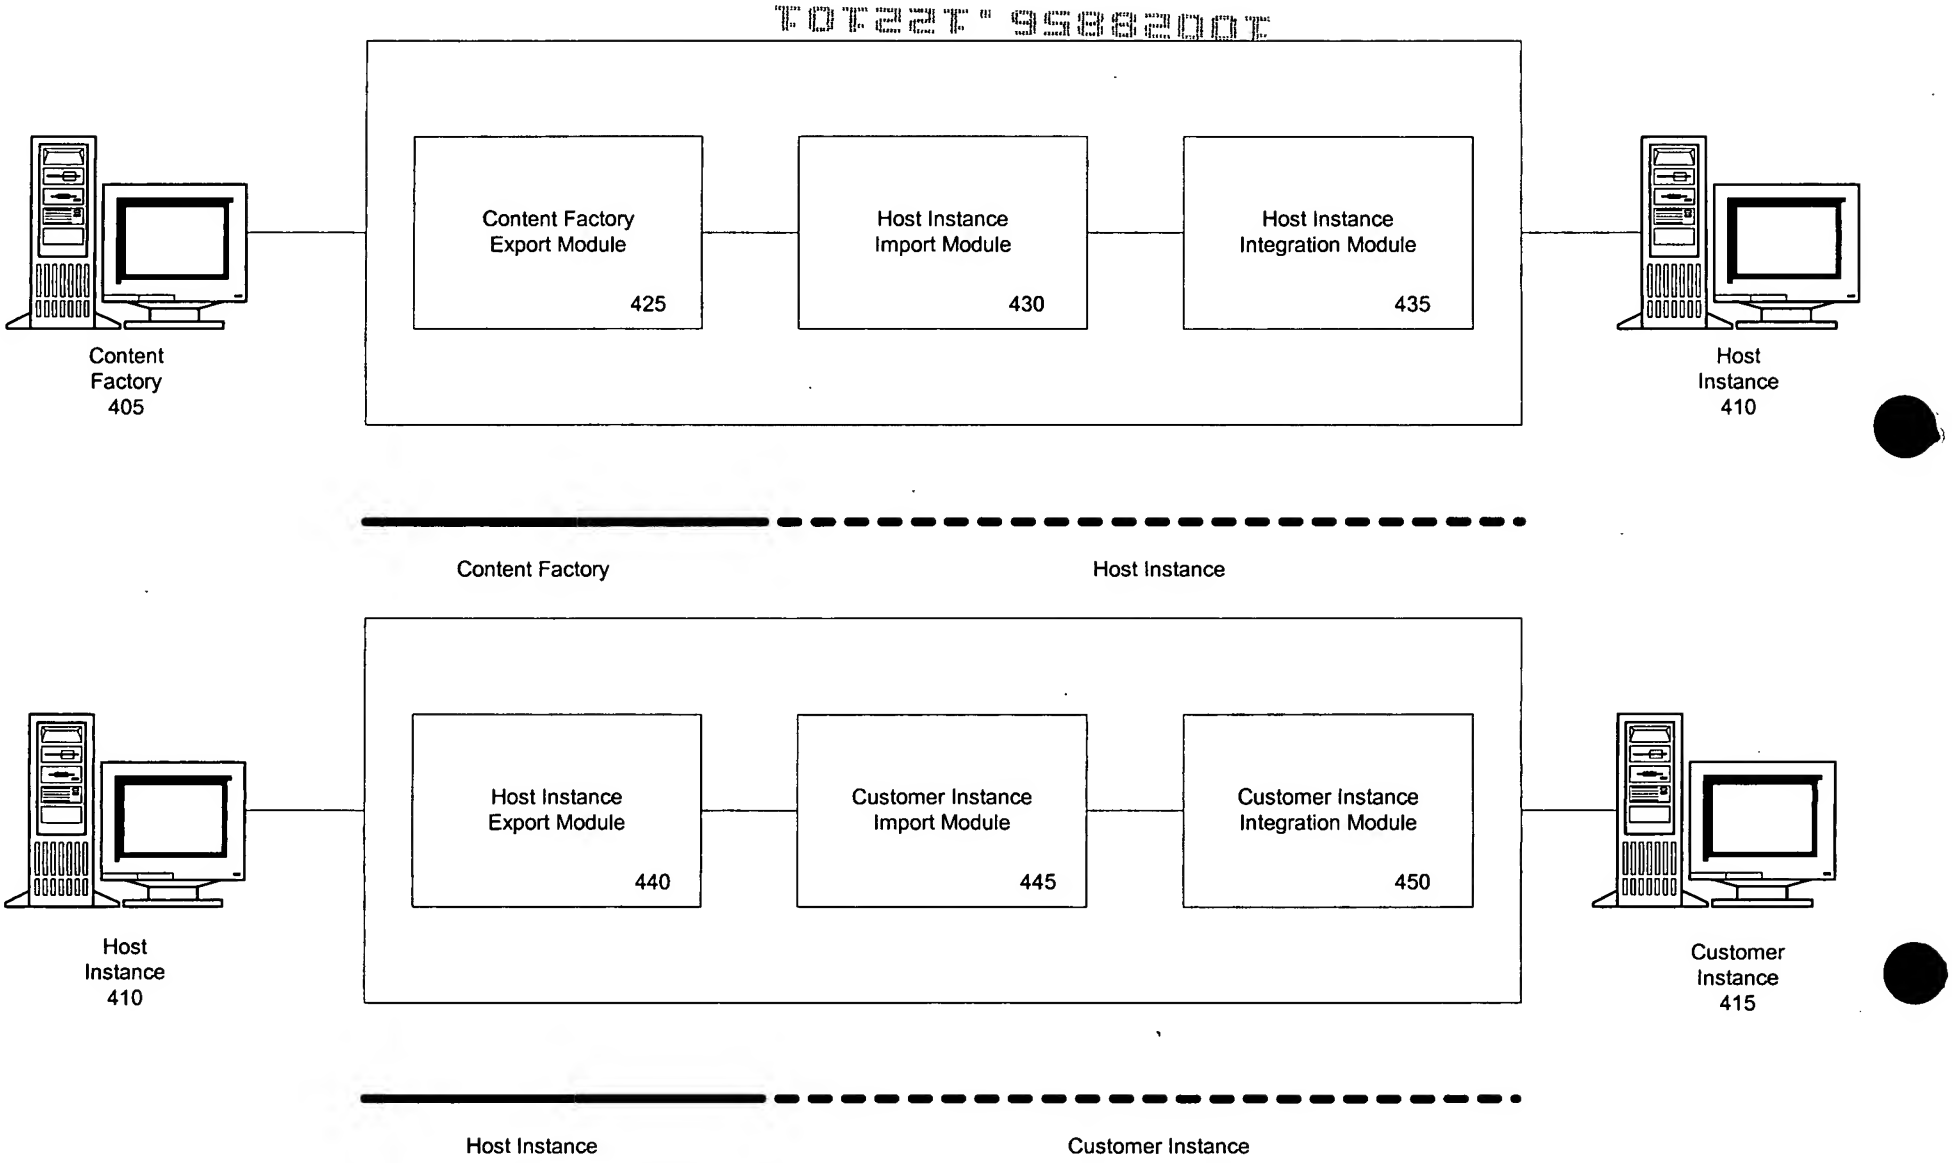

Figure 4

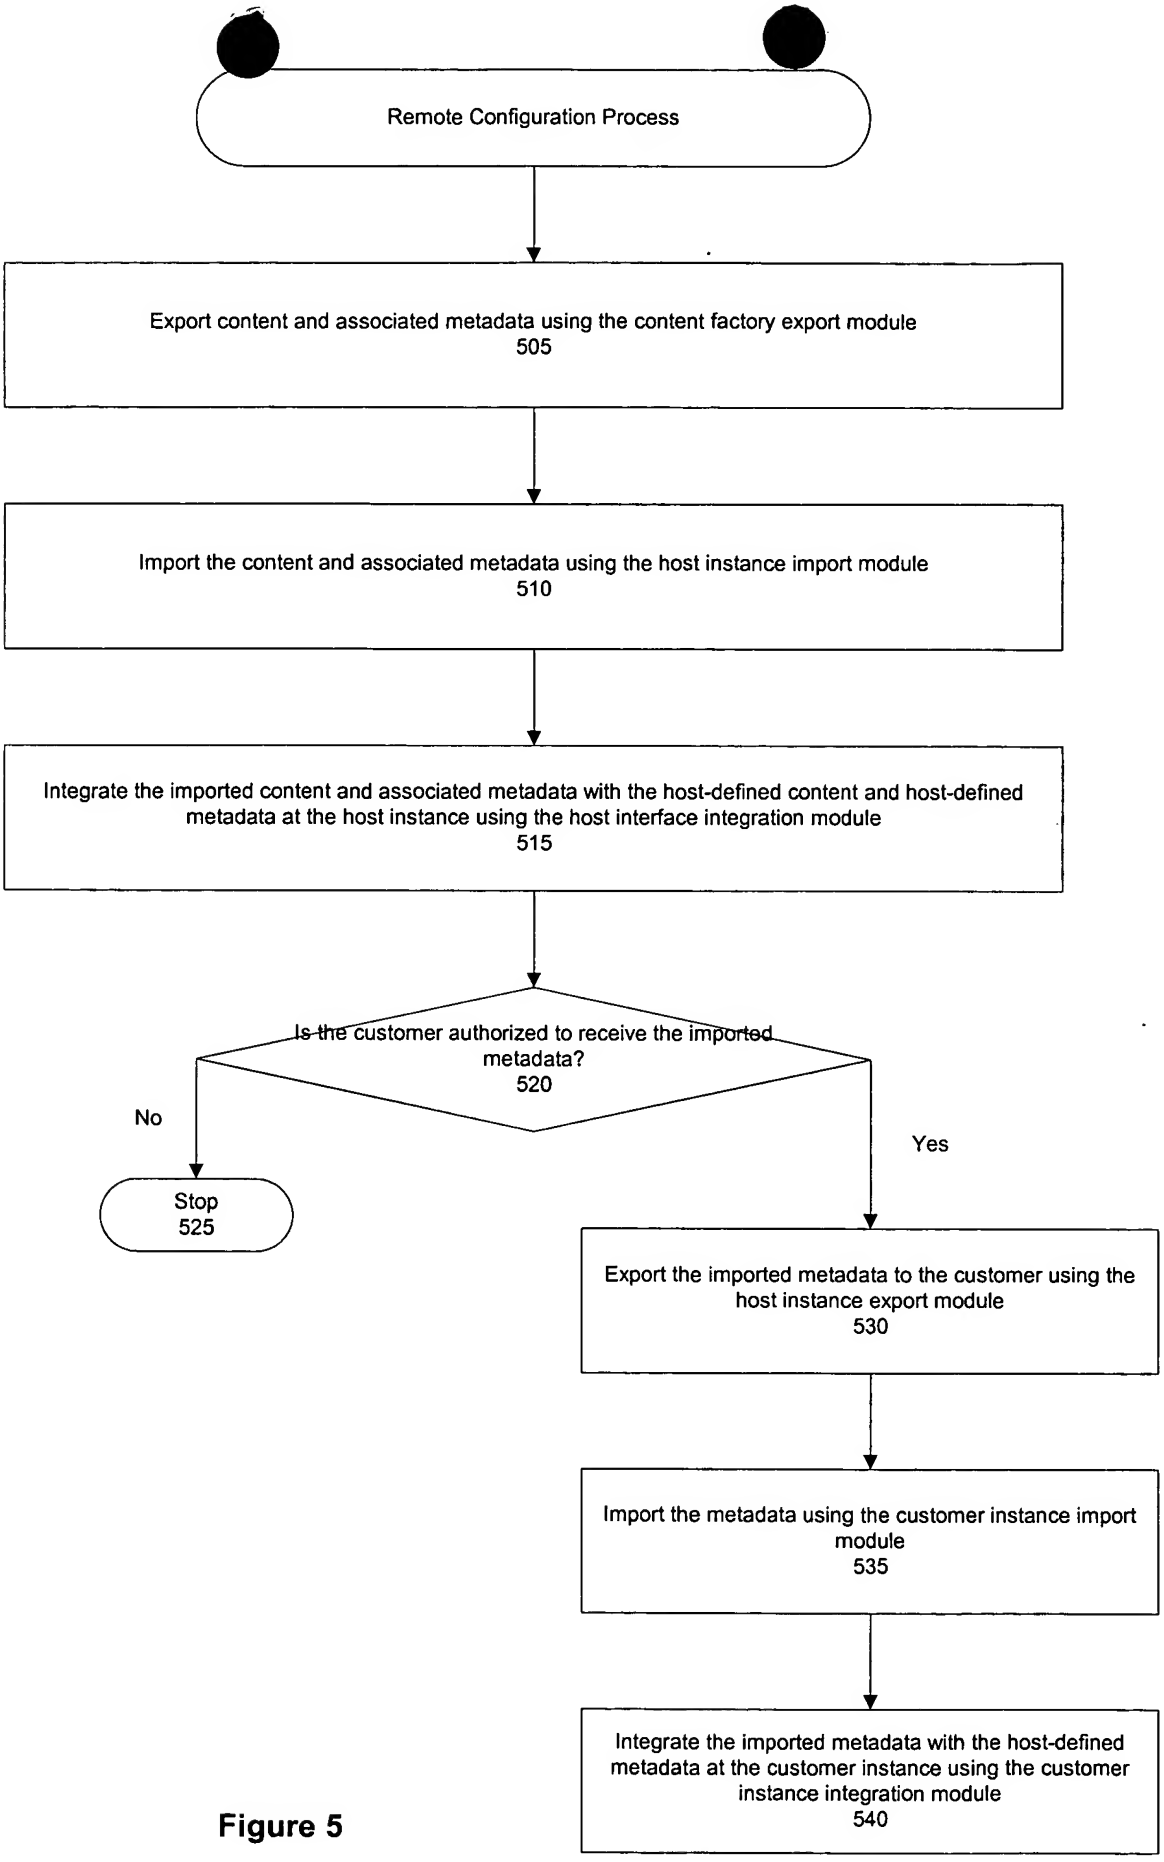
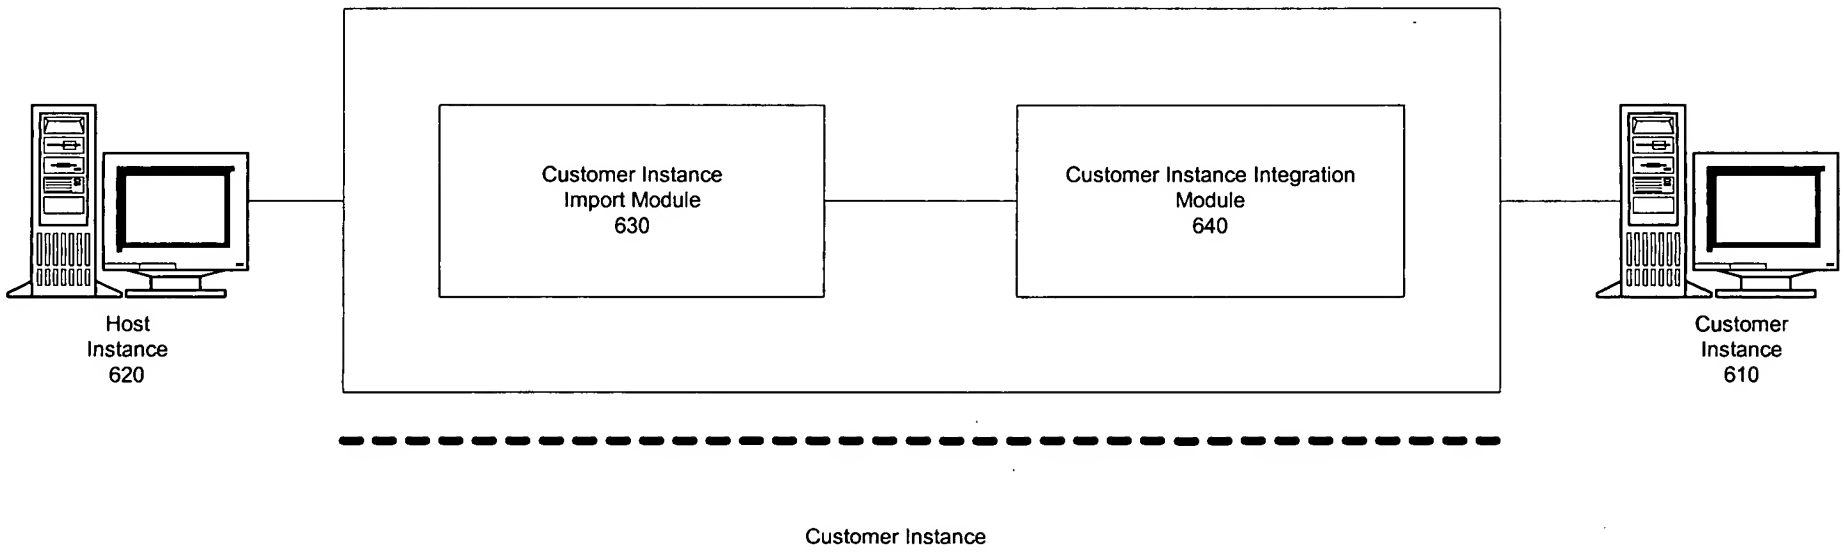
Remote Configuration Engine 400



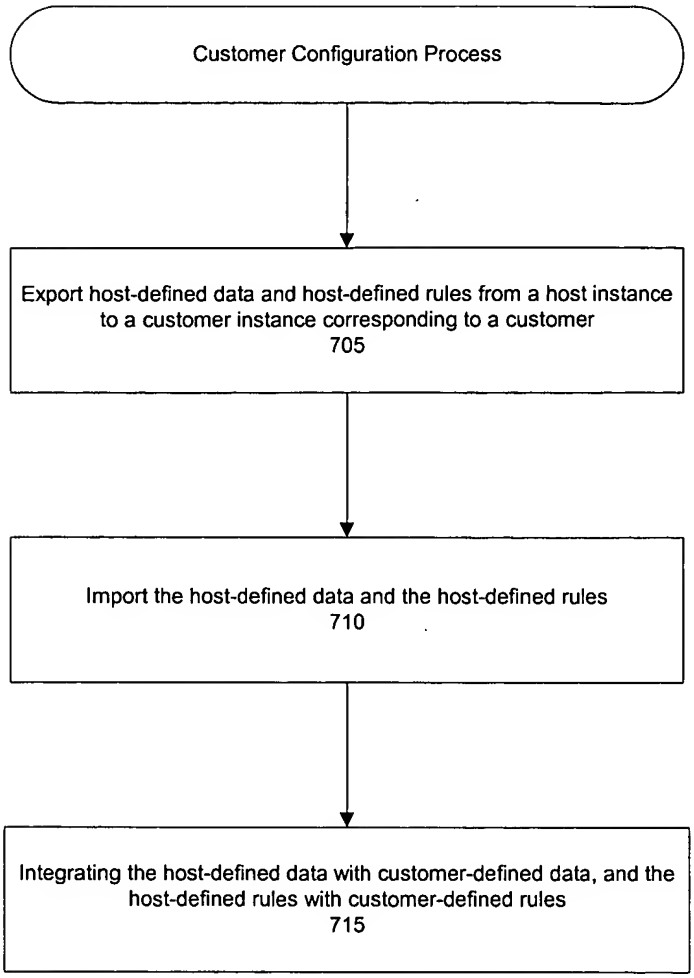
Remote Configuration Process
Export content and associated metadata using the content factory export module
505
Import the content and associated metadata using the host instance import module
510
Integrate the imported content and associated metadata with the host-defined content and host-defined metadata at the host instance using the host interface integration module
515
Is the customer authorized to receive the imported metadata?
520
No
Yes
Stop
525
Export the imported metadata to the customer using the host instance export module
530
Import the metadata using the customer instance import module
535
Integrate the imported metadata with the host-defined metadata at the customer instance using the customer instance integration module
540

Figure 5



Customer Configuration Engine 600

Figure 6



Customer Configuration Process
Export host-defined data and host-defined rules from a host instance to a customer instance corresponding to a customer
705
Import the host-defined data and the host-defined rules
710
Integrating the host-defined data with customer-defined data, and the host-defined rules with customer-defined rules
715
